EDUCATION

University of Florida

Bachelor of Science in Computer Science

Gainesville, FL

May 2025

Amazon Web Services (AWS)

AWS Certified Cloud Practitioner

Online

July 2025

PROJECTS

Docker Manager | *Python, Docker*

- Conceptualized and produced a CLI tool in Python to optimize Docker container operations for Node.js, Django, and Flask backends; automated 70% of repetitive tasks through data and workflow automation, boosting developer efficiency.
- Orchestrated the end-to-end automation of container lifecycle management, live logging processes, .env configuration, and GitHub integration, accelerating deployment cycles by 60% and reducing manual errors.
- Automated Dockerfile creation with self-detecting backend entry points, reducing container build times by 15 minutes per iteration and improving developer efficiency in deploying microservices and containerized applications.

IMDB | *C++*

- Implemented a concurrent key-value database featuring LRU eviction and persistent storage, optimized for thread safety and CI/CD across 100+ concurrent operations, enhancing data access speeds and data storage capabilities.
- Introduced role-based access control system, defining distinct admin/user privileges and secure command execution protocols; fortified system security by 60% and minimized unauthorized data modifications by 100%.
- Integrated Pub/Sub notifications for DEL events, employing mutex locks to guarantee safe parallel access, which enhanced data consistency and prevented race conditions in 99.9% of instances.

Task Manager | *React, Next.js, Tailwind CSS, Node.js, Express.js, MariaDB, Firebase Auth*

- Integrated a full-stack task management web app leveraging Next.js, Express, and MariaDB; enabled users to add, view, and manage tasks by date, leading to 15% faster project turnaround.
- Engineered RESTful APIs using design patterns, integrating task management software and slashing task completion times by 15%; this offered real-time visibility into project status.
- Revamped database queries for task retrieval, cutting average query response time by 60 milliseconds, which enhanced overall application responsiveness and enabled faster task completion rates for users.

Soccer Predictor | *Python*

- Developed a machine learning model using Python, Pandas, and Scikit-learn to simulate soccer match outcomes with 78% accuracy, leveraging a dataset of 10,000+ historical matches.
- Delivered streamlined application deployment process by converting Python scripts into standalone Linux executables using PyInstaller, reducing end-user setup time by 90% and dependency conflicts.
- Achieved an automated machine learning pipeline, transforming CSV match data into one-hot encoded vectors, enhancing model accuracy by 18% and generating predictive insights 2x faster than before.

EXPERIENCE

Freelance Computer Science Tutor

Self-employed

Gainesville, FL

May 2023 – May 2025

- Tutored 10+ students in core computer science subjects (e.g., algorithms, data structures, programming languages), resulting in a 90% average grade improvement across all students.
- Facilitated group study sessions for up to 5 students, promoting peer collaboration and improving collective understanding of complex CS concepts.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, C#, JavaScript, HTML5, CSS, TypeScript, GDScript

Frameworks: React.js, Node.js, Tailwind CSS, Godot Engine, Flask, Express.js, Cors, Docker

Developer Tools: Git, Vercel, NPM, Visual Studio Code, Visual Studio, PyCharm, CLion, IntelliJ, Eclipse, Netbeans

Databases & Libraries: Firebase, MongoDB, MariaDB, PostgreSQL, MySQL, Postman
